12283. Re: [atari-midi] Re: Atari score edit software

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-07-12 23:45:43 UTC
From: Martin Tarenskeen
Topic: 12274 Message: 12283

On Sat, 20 Dec 2003, Charles Massey wrote:

> Score Perfect Pro 4 is the very best there is for the Atari!

I love SPP. But the Atari version 4.0 has some stability problems on my system. Sometimes it will hang when the fileselector is used.

Stability improves a lot if I delete the SPP_4_0.INF file each time before I start SPP. SPP 3.2 does not have this problem.

Another problem for me is that SPP on the Atari only runs with single TOS and in monochrome.

I still use SPP often, but use Mup on my MiNT system. For the adventurous Mup is able to beat SPP.

12475. New abc software releases for MiNT

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-06-11 02:58:18 UTC
From: Martin Tarenskeen
Topic: 12475 Message: 12475

Hi,

There are some interesting new releases of ABC music software.
I have uploaded the following RPM packages to the SpareMiNT server:

abcm2ps-3.7.18 (new stable release)
abctab2ps-1.6.0

I have uploaded the following packages to my personal website
(http://www.home.zonnet.nl/m.tarenskeen/download/mint/) :

abcm2ps-4.0.8 (development release)
abcMIDI-2004_01_18 (development release)

19696. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-01 00:56:02 UTC
From: charlie midi gfa
Topic: 19661 Message: 19696

cubase audio would be the best solution
maybe a sync track box and cubase audio , good luck , and happy newyears

its always a vast wrealm learning amonst others

midi has
play stop resume
in its internal time code

here is a fun experiment
i like using this at different quantized values
a smaller beat--> within a larger beat

ei:

p=play
s=stop
r=resume

*play and stop a one bar looped beat in a rythmic pulse syned to a 4 bar
beat

4bar beat:: 1234 1234 1234 1234
1bar beat:: p-s- rspp -p-s -rs-

ips can do

usaully i use midi internal/slave sync

charlie

Subject: Re: [atari-midi] LFO generator

The Akai receives pulses. I experimented using my audity2000. I programmed
a simple sound with a MIDI clock synced square Lfo.

I was looking at Electronic cow programs and might use one of the synths
they made to generate the pulse. I'll need another VGA/audio adapter.

My main problem is space restriction right now, but you guys can't help
much!

19700. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-01 11:26:23 UTC
From: Jason Adkins
Topic: 19661 Message: 19700

Cubase Audio on an ST,either Yamaha CBX-D5? or Soundscape? I think there were 2 uk makers which made devices to run hard-disk recording on the ST ,I think Cheetah made a box? who also made the brilliant MS-6 synth (like a Matrix1000 but fully programable from front panel also came with ST editor) ,the SX16 sampler which was crap and I know it was crap because I used to own one,in 4 voice mode ok but in 8 voice fucking terrible and as for the MS800,just plain weird.

Oh yeah,Happy New Year all!

19701. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-01 18:11:16 UTC
From: Francis Cote
Topic: 19661 Message: 19701

I tried sending the MIDI Click from the audio out of the Atari and it
didn't work.
I tried sending a signal from my SQ80 with a square LFO and it didn't work.

I have to do more research...

19702. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-01 23:19:31 UTC
From: charlie midi gfa
Topic: 19661 Message: 19702

no if you record this pulse u had mentioned to a cubaseaudio track
then play back like you said u did earlier in a post

charlie?

Subject: Re: [atari-midi] LFO generator

I tried sending the MIDI Click from the audio out of the Atari and it
didn't work.
I tried sending a signal from my SQ80 with a square LFO and it didn't work.

I have to do more research...

19703. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-02 00:08:57 UTC
From: Francis Cote
Topic: 19661 Message: 19703

I don't have cubase audio. And I don't see the difference between sending
the audio pulse directly and recording/playing it back.

Or, I don't understand what you mean Charlie.

Good but keep on rambling because your funny and make some music with
your Atari's they are very good at it... ;)
Rolf?

19707. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-02 02:49:22 UTC
From: Francis Cote
Topic: 19661 Message: 19707

Have no bloody idea what Rolf means.
Oh yea ;"Roll over large fucker"?

Lol

Good but keep on rambling because your funny and make some music with
your Atari's they are very good at it... ;)
Rolf?

19709. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-02 03:17:30 UTC
From: Francis Cote
Topic: 19661 Message: 19709

Lol

Funny.

Something else funny... I re-checked the manual for the AX60 and it says :

"Arpeggio Ext Sync : accepts a negative going sync signal such as that
produced by the metronome output of many drum machines..."

19710. Re: [atari-midi] LFO generator

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-02 03:58:39 UTC
From: Jason Adkins
Topic: 19661 Message: 19710

This is good too:

http://youtu.be/aKdOotrQ_Hw

and:-

http://youtu.be/0JQwQy0dT1s

better than the Lennon/McCartney original I'd say well different anyway.

In what way? Right the SH101 has a little sequecer in it which will step forward from say a 909 which uses the rimshot as a trigger out,it is not audio it is an electrical pules,same with the Sequential Pro-One although with that you had to send a trigger ahead to get in time i.e. it will play the last note first and then the new note Savvy?
I guess you mean the same as above,not surprised you used that method the Linn LM-1 I'd imagine doesn't have midi and the midi on the JX3P is seriously bad,never liked that synth or the Jupiter 6 for that matter,here is a great Linn track by the peerless Martin Rushent:-

I read on a forum I found searching the web that some guy recorded the output of a Tr-606 and used a sampler after to sync the Ax60's arrp. I remember clearly doing it when I got the AX, many years ago, sending a sound from my Audity 2000. It worked. I just can't reproduce that.

Also, I saw somewhere else to send a pulse like a metronome (again...).

If someone could sample the output of a Tr type drum machine for me, I would check the result and figure out a way to simulate it... I used to have a Tr-707. I regretted selling it after a while, even more so now!

Try a square wave at 24 pulses per quarter note, which is what old,
pre midi, Roland dync sync was but through a din plug

...shiver...din plugs...oooohh nasty nasty din plugs. Thats one thing
we don't have to put up with now!

Hope that helps.
Simon

The TR707 is a good machine I loved the TR727 Latin percussion too
(also has Sync24 which runs TB303/MC-202) both beloved by Chicago
House musicians,it is still an electric pulse not a f**king audio one
It is a trigger out but it is not an audio pulse,,,,,,,

Of course if what you say is true about the AX60 then I havn't got a
clue because never seen one let alone used one.

Samples of the Roland TR stuff are all over the web,probably the most
sampled drum machines on the planet.

You do if you use proper midi with proper synths like an Akai MiniAK
and the analog Minibrute has proper midi din in/out too.
I agree I don't like bloody Din leads either but better than shit
loads of individual cables.....
Remember you cannot do everything with a DAW and a fast PC/Mac,it just
does an impression.
Actually if there is one program I'd like to terminate it is Auto-
Tune..........

+1 here too. If you can't sing at all, either stop singing or become a pop star...

I'll try the 24 pulses trick.

ha ha, I wondered ,as I pressed send who would call me out on that.
Score ten points Jason!

Yes of course midi is a din plug. I should have said 'audio din'
Five (& do I remember correctly some with seven !!) connections, not
the three that is midi.
Now shudder!

Also, although not on Atari & dependant on your hardware.
You could go Atari>PC/Mac> AX60. Which seems a bit of a fiddle

http://www.expert-sleepers.co.uk/silentway.html

useful info

http://www.adambaby.com/studiotech_sync.html

or maybe cook up a din sync circuit using an Arduino

Simon

i feel it will perform the same
its a pulse length wave

and music over speakers or headphones is really electricity
too

so measuring the current passed thru audio lines , it may be able to
duplicate preexisting communications as we know as "trigger" or "cv"

good luck

people make music with electricity ...
now is time to make electricity with musics

charlie

1-0 mate,nice to know I'm getting a bit of notoriety like Charles "Charlie" Charles:- http://youtu.be/y4CXY6TVBMc
The ST monitor out is a 13 pin and an Akai S700/X7000 separate out cable is the same not that you would want a S700/X7000 these days but Try soldering up a 13pin to 6 jacks for the X7000,it will do your f**king head in man when I had mine I was constantly repairing it.

Hey! My favourite Pistols song.
But it won't let me play it because of fucking territory control.

19737. Connecting falcon to vga monitor

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-01-04 20:40:04 UTC
From: Emile Tobenfeld
Topic: 19737 Message: 19737

Hi

I have a falcon 030, but can't find the monitor connector I'd like to connect it to a VGA monitor if it still works.What do I need? Thanks.

Lightning strikes are never good,They can kill you know...
I reckon its a family of baby Squirrels eating my connectors,and a
family of mice chewing the way through my hard drives internals.
Might put the soundcard back in the G4 Dual and the 256mb Video
card,at least that works bloody properly,sodding G5 PowerMacs totally
unreliable,I guess anything with 11 fans in it would be..... had
about 4 until I got one that worked and now that has packed in.

Try st-freakz.co.uk or Best Electronics if in the US/Canada region ,I think there is a couple of guys in Germany and Poland which might be able to sort you out but i can't remember the links. If the Falcon won't start it will be the psu same as the ST,check the above for that too.

I remember you had problems with the G5 you had received, but I thought
they had sent you another functional one.
What's wrong with it?

If I'm not mistaken Emile, you are on the west-cost of USA (I remember emails you send here and there).

Best electronics has them, for 24.95$

Falcon VGA Monitor Adapter

This adapter plugs into the Falcon DB19 Video port and allows you to use a standard IBM VGA monitor on the Falcon *CB102158 $24.95*

http://www.best-electronics-ca.com/falcon.htm

That's really bad luck somehow...

I had lightning problem few years ago - power supply for older G3 iBook was destroyed, and Ethernet connector stopped to work. I bought new PSU, and use different computer for internet and mail, and after this lesson always switched off my gear during the storm. When I have tried this G3 some time ago, to my surprise Ethernet is OK. Never mind, I use it now only for scanning.

I bought second hand G5 two years ago, seller said it works, but when I switched on, it didn't booted. I have tried all kind of resets, bought new RAM modules (because LED indication showed it can be RAM problem), nothing helped... I wonder if I can revive it one day.

Hi Dan,

Yeah,dunno what is going on,I was joking but unplugging stuff when there is a storm is a good idea actually,I remember when I was a kid my dad making me unplug the external tv aerial and putting the cable out of the window.
I originally bought a 1.8ghz dual G5 Power Mac and I did the same replaced the ram and the battery as it was reporting the same LED's as yours,I never got it going.The one that is now not booting but occasionally showing the grey Apple logo with white background then freezing is a 2.7ghz dual I'm hoping I can sort it out but again I'm not convinced I'll be able too,bloody things.Glad i have my working Atari's !

Unfortunately I have heard about problems these G5 could have...
mainly logic board, and some can have problem with cooling system. I
will probably give up with that one I have, I've got it cheap. At
least it has nice box :-) Sometimes I see G5 in recycle shop, or in
classifieds, but for much more money.

Yeah I have looked the G5 Power-Mac faults up on the web and they all say the same thing as you,logic board,bloody piles of crap no wonder they switched to Intel.I did the "hairdryer" solution on the 1.8ghz dual but didn't work,you would think with 11 fans in it it wouldn't suffer from a cooling problem..... I agree it looks pretty though,i'll probably put them outside to grow plants in......

Hi Emile,I think it is just a standard fan,you might be able to sort the one you have with a bit of oil and dusting think easily available like the ones in the Mega/MegaSTE/TT,easy fix,even I could probably do it ;)
Congratulations though for even owning a Falcon they are rare as hen's teeth,totally brilliant music computer.
Oh yeah and thanks for DR-T's KCS,I don't use it myself I use Cubaes but my friend who owned a dub reggae label swears by KCS till this day,you should hear his girlfriend singing over what your KCS did:-

i have been asked this before so here it is:-

This to also to remind me where I have put some stuff...

Samplers:-

Emu ESI32 Turbo 32mb
Akai S5000 256mb
Roland S-330 750K
Yamaha A3000 V2 96mb with extra out board

Synths:-

Kawai K4R
Kawai K1
Kawai K1m
Roland D-110
Yamaha DX27
Yamaha TX802
Yamaha TX81Z
Arturia Minibrute
Akai MiniAK
Korg 707
Korg EX-800
Korg Wavestation SR
Korg Monotron Dual
Korg Monotron Delay

Romplers:-

Roland JV1080 + Hiphop & Techno cards
Emu Proteus 1000
Roland U-110 with Latin Percussion & Rock Drum cards.

Groove Boxes:-

Korg Monotribe
Roland MC-303

Drum Machines:-

Boss DR660
Boss DR220e
Yamaha RX17
Kawai R50e
Akai XE8 (rack)

Sequencers:-

Roland MC-50
Atari 1040 STE 4mb Tos 1.06
Atari 520 STE 2mb Tos 1.62
Atari MegaST2 Tos 1.4
Atari MegaSTE 4mb 4.3HD Tos 2.06

Misc:-

Boss SD-Ram recorder,x2 Tascam DAT's one portable other rack,Alesis Midiverb III,2 Alesis mixers with built in FX,Behringer mixer with external Behringer reverb/delay + compressor,Edirol USB soundcard,Emu PCI soundcard,M-Audio PCI soundcard,Emagic AMT8

19754. Atari gear to dispose of also synth gear

Hi,

I have at least the following atari gear to get rid of. Its going to a surplus place thursday unless other arrangements are made.I'm sure more will show up (t least a hard drive or two upon further cleaning of the basement.

Here is the deal.

If you can get to my home in framingham mass (near boston) its yours.

If not, I'll need $40 for the first item, 25 for each additional plus what ups charges to pack and ship it.NOne of it has been used for over 10 years.

mega ste
1040 st
2 computers model unmarked
5 monitors
mega st 4

I also have a bunch of music gear to get rid of. I have a purchaser lined up for the lot, but will entertain offers for pieces if they don't mess up the lot sale. ALl items offered as is.I do not have time to test them

Peavey PC 1600 (I have 2, one has one dead fader don't kno which)
yamaha a 3000 sampler
Yamaha mcs 2
1 yamaha foot pedal
Korg EC5 foot switch
kmx midi patch bay
2 Rane ME 15 graphic eq
yamaha rm 50 drum mod
lexicon pcm 7
2 lexicon jam man am keeping one
Digitech tsr 24
Digitech time machine
behringer eurorack mx2642a
peavey spectrum analog filter
2 yamaha tx 7s
trigger finger
kurzweil expressionmate
korg wavestation sr
roland mpu-101 midi to cv converter
lexicon lxp-1
lexicon lxp-5 (0, 1, or 2) have not yet located but recall owning at least 1
ensoniq esq-m
alesis mmt-8
ibiez dm 1100 delay

2 peavey ap 32 audio patch bays -- some normalization wires clipped
JL Cooper Mixmaster midi controlled mixer

-- Emile

From: charlie midi gfa
Topic: 19762 Message: 19762

hi
ive used cubase for a few years now and its unlike most sequencers
available for the atari . very reliable easy to use fun etc...

but
i ran across afew downfalls ....

two i can think to ask at the moment are

1:is there a function to split a single channel track into multi tracks,
one for each note in the original track , ?

how does a user do so if no function ?

2: why dont these system real time events get handled and work or be
edited ?

make a midi file in another sequencer ,persue your song and next load into
cubase .
if contains the system real time messages
11111010 sart
11111011 continue
11111100 stop
cubase doesn't handle these events

Topic: 19762 Message: 19763

Hi Charlie

I don't write much to this forum but I do read it. I've used Cubase 2.0 for 20 years.

For 1., you can use the Logical editor to extract specific events (eg notes) to another track. I use that all the time to split my drum track into several ones (one for each instrument).
But you have to do it by note range or individual note number.

For 2, I am not sure. I think they just control the sequencer itself, so they can be recorded or sequenced, they're like synchronization information (Midi Time Code).
But you can insert special events into Cubase itself from the List editor, you have to insert it in the list, then change the type. There is no such thing as start/continue but it's possible to stop the replay.

I hope it helps

Vincent

if you haven't allready tried use the modem .drx
and rename to modem.drv
then once cubase loads u need to use a track assign
and set it to modem .. i forget what it realy says
but it where you can choose mros/atari / now modem will show up there ,,,,

try that for starts

Hi Charlie,

I have tried the modem.drv which doesn't work I think that is for the
serial port not the parallel as is the export.drv.
My Cubase V3.02 doesn't come with any specific parallel port drivers.I
suspect the Parallel expander I have is actually a PC one which needs a
custom driver for the Atari.There was a webpage with a Sound On Sound
magazine reviewing it that said you did so I'm stumped!

Then it?s a Midex or Midex+ and there are Midex drivers in Cubase,- no ?
Or is it some 19" SMP interface ?
When I had Cubase Atari v3.1 Special Edition, there were all drivers
included in a folder on disk.

the "export.drv" is strictly and only for C-Lab/Emagic Export device !!!

From: Jason
Topic: 19781 Message: 19781

Hi all,

I have a friend who has a STacy2 who says the external PSU is working
but it still will not power on, any ideas?
Thanks in advance for any help, I'd like to get it working for him
because he is really depressed at the moment with family and life
so If I could fix it for him I think it would really cheer him up.

From: Emile Tobenfeld
Topic: 19782 Message: 19782

I posted two new videos to You Tube -- they can be se at http://youtu.be/XRmLLMt_Icc and http://youtu.be/5EFiCbmlO9Q

"A Bird in the Hand" and "Dancing Across TIme" are excerpts from the fourth of my "Light into Motion" events, which are held at Outpost 186, near Inman Square in Cambridge Mass.These events combine improvised video, music, movement, and sometimes spoken word. The collective personnel for this performance were:

Doctor T - Video and Movement
Tim Mungenast -- guitar
Michael Knoblach -- percussion
Tracy Simonelli -- movement
Nicole BIndler -- prerecorded movement

Combining this many creative elements in the intimate space of Outpost 186 has been really exciting and fine for all of the artists. The next event in the series is on May 10 and we need more dancers.

The format is part performance and part workshop, and dancers with any amount of improvisation experience are welcome to join us. Email me at emile@... if you would like to dance at this event.

19785. Architectural Rhythms, Philly and DC photo essay on flickr

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-05-05 15:09:36 UTC
From: Emile Tobenfeld
Topic: 19785 Message: 19785

Hi,

I posted a new photo essay on flickr at
https://www.flickr.com/photos/22231918@N06/sets/72157644508896352

Architectural Rhythms, Philly and DC
https://www.flickr.com/photos/22231918@N06/sets/72157644508896352 is an extension of my Architectural Rhythms photo essay from last year
https://www.flickr.com/photos/22231918@N06/sets/72157633360951357/
Notes from that photo essay are repeated below.

These photos were all taken during a trip to Philly and the DC area in May 2013 and are ordered chronologically. The 16:9 pictures were taken with my Panasonic Lumix LX7 - an amazing pocket sized camera. The 4:3 pictures were taken with my Nikon D-90 SLR with an 18-200 zoom.

Special thanks to Sean Isabelle, Lois and Arthur for putting me up and showing me around.

Repetition has been a part of architecture throughout the ages. The advent of skyscrapers increased the possibilities for repetition, because of the larger scale of the buildings. The modern style, for better or worse (I would say some of each), accentuates the repetition because of its use of simple forms and symmetry.

The use of reflective material such as glass and stainless steel further accentuates the sense of repetition. I find this fascinating–the way behemoth buildings seem to interact with each other through reflection presents me with some of my favorite photo subjects.

Almost all the images in this photo essay are of architecture that uses repetition, and all have some kind of rhythmic element to them.

I love natural forms.but I also love man-made forms. I do not consider one to be essentially more beautiful than the other, for at the bottom of things man is a part of nature, and so everything man-made can be thought of as being natural!

I hope this photo essay makes you more sensitive to the beauty to be found in the urban environment.

-- Emile

19787. Videos posted to You Tube

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-05-16 23:20:27 UTC
From: Emile Tobenfeld
Topic: 19782 Message: 19787

I posted two new videos to You Tube -- they can be seen at http://youtu.be/rhmY9OEEONc and http://youtu.be/QTaDGiYTfPQ

"Don't Look at Me That Way" and "By Ones and Twos" were recorded on May 10th at the fifth of my "Light into Motion" events, which are held at Outpost 186, near Inman Square in Cambridge Mass.These events combine improvised video, music, movement, and sometimes spoken word. The collective personnel for this performance were:

Doctor T - Video and Movement
Eric Crawley -- Harpejji and Electronics
Cullan Powers -- Movement
Tracy Simonelli -- movement
Christy Choi --- Movement
Reme Gold --- Movement
Leslie Lawrence --- Movement

Combining this many creative elements in the intimate space of Outpost 186 has been really exciting and fine for all of the artists. The next event in the series is on June 15 and will feature my video, the amazing improvised poetry of Karen Klein, music by Eric Crawley and Tim Mungenast, spoken word and movement by Anne Tolbert, and other dancers t.b.a.

"Don't Look at Me That Way" is an unstructured improvisation and gets its title from the intense facial expressions of the dancers. Dancers in order of appearance -- Leslie, Reme, Cullan.

"By Ones and Twos" is a structured improvisation alternating between solos and duets. Dancers in order of appearance -- Tracy, Reme, Christy, Cullan, Leslie.

-- Emile

Hi folks,

I'm performing Saturday night at 119 Gallery in Lowell ass part of this excellent double bill.

Fire Maidens From Outer Space: [Brooklyn NY, Philadelphia PA]
Bonnie Kane – sax, flute, electronics
Reuben Radding – bass
Dave Miller – drums
+
Dr T & friends: [Boston, Cambridge]
Eric Crawley – analogue synths
Tim Mungenast – guitar
Emile Tobenfeld – live video

119 Gallery
119 Chelmsford St
Lowell, MA 01851
8:00 PM
http://www.119gallery.org/

My videos, including recordings of some of my performances, can be viewed at
http://www.youtube.com/Tobenfeld

Culinary note: There is an outstanding Cambodian restaurant next door to the gallery.

Hi folks.

I'll be doing a 10 minute improv at Longy School of Music on Friday as part of their September Fest http://longy.edu/about/events

I'll be working with Dave Bryant, keys and Jeremy Von Buskirk, laptop. The venue is at 27 Garden Street, Cambridge. Admission is free.

On Sep 23, 2014, at 3:04 PM, Cassandra McBride <cassandra.mcbride@...> wrote:

> The concert is featured on the home page of our website, and is also listed on our online events calendar at: longy.edu/about/events. Your set will most likely be around 9pm, give or take a little. Other performances on the concert include Bach’s Fugue in F-sharp Minor – with animation, a short film with soundtrack by one of our faculty members, Bartok’s String Quartet No. 4 with inspired choreography by our Dalcroze students, and short musical improvisations in response to Imagist poems read aloud.

Hi

A half hour video from my recent Light into Motion event is posted at
http://youtu.be/jIPMmZ6NQ-w

The Oct 25 "Light into Motion" was performed in two long continuous sets. This is the first and more cohesive of the two. The performers were:

Doctor T - video and movement
Tim Mungenast --- guitar and electronics
Karen Klein -- poetry and movement
Glynis Lomon -- movement, Voice, Aquasonic
Tracy Simonelli -- movement
Eric Zinman -- piano and movement

-- Emile

19810. Cubase 3.01 fails to load with Midex+ and Key Dongle

Yahoo group: atari-midi (2014 — 2016)
Date: 2014-11-24 01:14:11 UTC
From: David Chang
Topic: 19810 Message: 19810

I managed to acquire an original copy of Cubase 3.01 that I've loaded on my Ultrasatan drive. I also acquired a Midex+ and unfortunately Cubase fails to load when in use with the Midex+ even though I've inserted the key dongle firmly into Slot 1. The program loads fine with just the key dongle. I've made sure that the Midex114.drv file is enabled and the Midex+'s lights turn on and seem to be working fine. Does anyone on the list have any ideas of what could be wrong?

David

Hi David I have forwarded this to Atari ST musicians network on facebook
as I know a lot of people on there have Ultrasatans + cubase.
What exactly does Cubase do when you try and load it with the Midex+?
Have you tried the key dongle in a different slot?

Before investigating in other directions like Satan drive etc.,- CLEAN
the contacts of the ATARI ROM port as well as the contacts of the
Midex+′ slots and the contacts of the dongle itself !!!
Use a (pencil-) rubber and (if necessary) Q-tips and 100% isopropylen
alcohol.

The Ultrasatan drive works fine. I have already verified this since I used it with only the Cubase key plugged in and it worked perfectly. I think this is primarily a Midex+ issue and or related to drivers.

Do you have any chemicals that are safe to use on electronics for removing oxidization other than a pencil eraser?

icd uses and allots memory... so if he has a 1 meg machine u need to
sacrifice some .mod or .all or .arr or .drv
and find the folder memory
and some other stuff i forget atm

are u using a machine with more than 1 meg ?
chaz

I have a 4MB machine. It's been working fine for the last few years with C-Lab Notator and Emagic Logic. I only recently decided to try Cubase in order to try a different MIDI sequencer.

So, when you own Notator and Logic, you eventually also own a Unitor N
or Unitor 2 ?

In that case, in Cubase 3.xx, there are drivers for Unitor too.
You could use that testing if Cubase loads w/o having MIDEX connected,-
Unitor instead ...
Would indicate a faulty MIDEX perhaps.

The drivers should be in a folder on the program disk(s) and the Unitor
driver should look like unitor.dr
You put it in the desired location and rename it to unitor.drv
IIRC ...

Hi again David,

Here is a link to download the driver for midiex this one is
midex115.drv which I presume is the last version, click on
mros0296.zip and once downloaded unzip it and the file is in the MROS
folder, this driver def works.
http://www.filewatcher.com/b/ftp/ftp.steinberg.net/Archives/Atari/cubase-0.html

From: Adam Bickers
Topic: 19810 Message: 19820

If all contacts are cleaned, midex.drv is installed and still no joy it may be a faulty Midex itself (hopefully not). 99% of the time these problems are caused by dirty contacts on the ROM port or dongle. Isopropyl alcohol from Maplin and a cotton bud or clean dry tooth brush should do it.

Failing that it might be worth opening up the Midex to look for obvious bad solder joints or loose components.

I didn't think the Cubase Key fitted in the Unitor cartidge slot. You need a Combiner or other cartridge slot expander. Unitor 2 does work nicely with Cubase though. That's what I'm using in my current set up.

The Ultrasatan drive works fine. I have
already
verified this since I used

it with only the Cubase key plugged in
and it worked
perfectly. I think

this is primarily a Midex+ issue and or
related to
drivers.

Do you have any chemicals that are safe
to use on

electronics for removing

oxidization other than a pencil
eraser?

Yes, you?re right,- Unitor N doesn?t work because it has no dongle port
at all, except one ownes C-Lab/Emagic Combiner.
Unitor 2 should.
I cannot test Cubase 3.x dongle w/ Unitor 2 because I sold Cubase ATARI
meanwhile,- kept NotatorSL and Logic though.
Do you say, Cubase dongle doesn?t fit Unitor 2 front dongle port ?

B.t.w., I have a great condition Steinberg KeyExpander (connectors for 2
dongles and ATARI ROM port) for sale if someone is interested.

Has This Ever Happened to You? Video posted to You Tube

"Has This Ever Happened to You?" was performed on Dec 13 at Outpost 186 in Cambridge MA as part of the "Light into Motion" series. The video can be seen at http://youtu.be/puM_N7Xgoeg

The performers were:

Doctor T -- video and movement
Karen Klein -- spoken word and movement
Dave Bryant -- synths
Tsuyoshi Honjo - soprano saxophone
Jeremy Van Buskirk - laptop

-- Emile

Hi,

I just posted a photo album "Flowers 2007 - 2013" to flickr at
https://www.flickr.com/photos/22231918@N06/sets/72157647613448043/ . Enjoy-:)

I can't imagine being an art photographer and not taking photos of flowers. This set contains a selection of flower photos taken between 2007 and 2013. During this time I lived at 164 Old Connecticut Path in Framingham MA with my wife Marya until she died in 2012.

Photos with the text 'Yard' in their name were taken in the yard of this house. Photos with 'OCP' were taken during walks on Old Connecticut Path. Photos with 'Maureen' were taken in the flower garden of my dear friend Maureen Solomon.

Hi,

I just posted a photo album "Arlington Flowers 2014" to flickr at https://www.flickr.com/photos/22231918@N06/sets/72157649696781448/ Enjoy and Happy New Year.

I moved to Mass Ave in Arlington Center in March of 2014 so that I could lead a car-free life style. Arlington is a suburb just northwest of Boston and my location has excellent bus service.

They grow a lot of flowers along Mass Ave, in front of private homes, developments, stores and on public plots maintained by garden clubs. The flowers are all close to the sidewalk, allowing easy access for photography. I always carry a camera with me, and a lot of these shots were taken while on other errands. There are also nice flower gardens on Pond Lane, which goes from the side of my building to Spy Pond, a lovely little lake 2 blocks from my house.

The great majority (possibly all) of these pictures were taken in Arlington. The first 3 also include my nephew Josh, his wife Eve, and their daughter Phoenix.

19833. Recording SysEx into Cubase...

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-01-04 17:10:18 UTC
From: noddyspuncture@...
Topic: 19833 Message: 19833

Hi folks,

I wonder if anyone can help me. I am using Cubase on my trusty Atari and have never had a problem with using it... but today I decided I wanted to back up the internal patches of a Roland drum pad... via SysEx.

I have read the manual... and have tried recording the data. I can send a bulk dump... or individual patches to Cubase... and the 'IN' light flickers... so it is seeing it.

But when I stop the sequencer there is no 'Part' created as you would expact... so it hasn't actually recorded anything.

Please could someone tell me if I am missing something?

Cheers
Tom

If I remember well, SysEx data are filtered by default. Just find this parameter and switch off the filter.

Hi !

It's in Options->Midi definitions
In the "Record" list, you have to make sure that "SYSTEM EXCL" is written black on white (not video reversed)

Note: this is for Cubase 2
Kind regards

Vincent

I'm glad you could find it with the help of Vincent as I have seen Cubase for the last time about 15 years ago and haven't it recently and for detailed answer would be necessary to find manual somewhere. I just remembered that this was often a problem users had with it, so I could use this advice for my MIDI consultations and clinics in the past... When Atari was my main computer for music, I have been working with Notator, not with Cubase.

hey guys,
i also can recommend to adjust the sequencer speed slow enough , depending on the sending device, to avoid buffer overflows.
for this i have a special sysex-dump-arr with dump-request per track and synth and switch for the midi bay with tempo swithes per synth / device. dumping the rack than is 1 session , wher you only change tracks dump after dump. works perfectly.
still happy using atari+cubase!

btw,
has anybody a link to cubase 2.0 manual as pdf ? i only found 3.0 so far on the net.
i borrowed my print version years ago (and of course did not get it back).
thanx
stan

STFM had a double-sided disk drive by default... so, 720 kB disks are a runner on an STFM.

strange because if I insert the floppy it shows me the contents but if I click on the program(.prg inside the floppy) tells me to drive is not responding,but if I insert a Atari floppy language(single sided floppy) it opens the program inside so I thought can only read 360k floppy.
I don't know,
thanks

Hello!

I think: 520STFM (1986–1987): build in single-sided 3½-inch FDD (and HF-Modulator)
Single sided means 360 kB (per side). It´s like the SF354.

With kind Regards

19850. "Reaching and Rising - The Music of our Breath" Video posted to You Tube

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-01-23 05:43:07 UTC
From: Emile Tobenfeld
Topic: 19850 Message: 19850

"Reaching and Rising - The Music of our Breath" was performed on Jan 10, 2015 at Outpost 186 in Cambridge MA as part of the "Light into Motion" series. The video can be seen at http://youtu.be/yL0PlFedyDg

The performers were:

Doctor T -- video and movement
Karen Klein -- spoken word and movement
Eric Crawley -- harpejji and electronics
Forbes Graham -- trumpet
Tsuyoshi Honjo -- tenor saxophone
Reme Gold -- movement
Cullan Powers -- movement
Christy Choi -- movement

The improvisation appears to end around 15:30, then continues. I call the first part "Reaching and Rising" and the second part "The Music of our Breath".

19853. After the Snow 2015 photo essay posted to flickr

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-02-03 05:44:50 UTC
From: Emile Tobenfeld
Topic: 19853 Message: 19853

Hi,

I posted a new photo essay called "After the Snow 2015" on flickr at
https://www.flickr.com/photos/22231918@N06/sets/72157650608337002/

As all of my Boston friends know, we had quite a storm last week. After the storm was over and the sun came out, I took some pictures. On Thursday, I brought my camera with me to my physical therapist on Mill Street in Arlington, and then to Whole Foods on Mass Ave. On Saturday, I was doing routine household tasks when I glanced at my balcony and saw irresistible patterns of light and shadow on the snow. On Sunday afternoon, I went to a dance called Nectar in Central Square, Cambridge, and took some pictures of much dirtier snow before and after, and a couple of pix out the window of the dance studio.

This photo essay consists of selections from these photo shoots. It looks to be a snowy winter (we had another storm today) and I expect to be adding to to it during the weeks ahead.

Enjoy, and stay warm-:)

Hi,

There was another big storm brewing as I posted the original "After the Snow" pix. By Tuesday, the snow had stopped, the sun had come out and it was bitterly cold. I took a bunch of pix of and over the balcony, shooting from the comfort of my apartment.

On Friday, I returned from an appointment and was pleasantly surprised to find the sun out, the sidewalk clear, and the temperature reasonably comfortable, so I took yet more pix.

I have added selections from these shoots to the original essay. The essay can be seen at https://www.flickr.com/photos/22231918@N06/sets/72157650608337002

Enjoy, and stay warm-:)

Hi,

I'll be performing video improvisations tomorrow night at a benefit for Mobius. I'll be doing a half hour set with trombonists Randy Pingrey and Tom Plsek and bassist Jon Voigt. I first worked with Tom and Jon in (gulp!) 1973.

The event is at Out of the Blue Gallery, 541Mass Ave in Central Square Cambridge. The full lineup is below. Admission is $20 --- go to mobius.org for more info.

<3RAGES 2015 Lineup

8:00 Logallucio, Tom Plsek, and John Voigt (text and sound; need MIC + STAND) 15 minutes

8:15 Jon Voigt - bebop poem (text and sound; need MIC + STAND) 10 minutes

8:25 Zayde (MC) (Need MIC + STAND) – 2 minutes

8:27 Emily Beatty (improv movement with 2 dancers) 2-5 minutes

8:35 Tom Plsek and Randy Pingrey -- (sound; trombone sandwich) 5 minutes

8:40 Dr T with Randy Pingrey, Jon Voigt, and Tom Plsek (PA and TABLE)

9:10 Emily Beatty (improv movement with 2 dancers) 2-5 minutes

9:20 Liz Roncka, Yuka Takahashi, and Jason Sanford (movement + sound; LIGHTS) 20 minutes

9:40 Islands (VIDEO PROJECTOR + objects + actions) 30 minutes

10:10 LSDV – (VIDEO PROJECTOR and PA and TABLE) 40 minutes

10:50 Emily Beatty (improv movement with 2 dancers) 2-5 minutes duration

11:00 Mondo Fiasco (VIDEO PROJECTOR) 30 minutes duration

11:30 SHROUD – (VIDEO PROJECTOR and PA) 40 minutes

12:10 ---Animal Hospital Setup of equipment---

12:25 Animal Hospital – (AMP hook-ups) 30 minutes

DURATIONAL WORKS

Margaret Bellafiore is roaming with her Extinction piece

Anna Wexler and Marie Lalavee - 2 hour installation/performance – site TBD

Leah Ceriello – 2 hour installation/performance in window

Andrea Zampitello – Evening-long video installation at back of space (will provide own projectors)

Tom Plsek and Randy Pingrey are roaming with trombone sandwiches.

From: Emile Tobenfeld
Topic: 19863 Message: 19863

Hi

I posted videos from the March 14 Light into Motion performance to YouTube at ► Play all or http://www.youtube.com/Tobenfeld

These videos are from the March 14 performance of "Light into Motion" at Outpost 186, which felt to me to be the most cohesive of the series. My video included a lot of sequences made from stills taken after our recent storms. See "After the Snow" on my Flickr site to see some of the stills.

Personnel were:

Doctor T -- video
Eric Crawley -- Harpejji and Cajon
Honjo Tsuyoshi -- saxophone
Eric Zinman -- synthesizer
Karen Klein -- Poetry and movement
Reme Gold -- Movement
Leslie Lawrence -- Movement

The video recordings have some imperfections -- its hard to perform and be cameraman in the same show! The first two, and to some extent the third, focus too much on my video and not enough on the dancers. The fifth one has a black section where one of the dancers was picking up a DVD player that had fallen off my table, and blocking the projection. All of these videos are unedited and have extraneous chit-chat at the start.

Thanks to all who performed with me. I hope that you will enjoy the videos despite the imperfections.

The next Light into Motion is on April 26 and will feature John Voigt's fast-paced beat poetics along with Karen's more laid back poetics. You can be part of it -- come dance with us.

Date: 2015-03-31 04:26:52 UTC
From: Emile Tobenfeld
Topic: 19864 Message: 19864

Hi,

I just posted a new photo album, "Glass Bricks at Harvard" to flickr at https://www.flickr.com/photos/22231918@N06/sets/72157651248971089

Glass brick walls make excellent photo subjects. The symmetrical pattern of the bricks plays off of the distorted images of the other side of the wall, which vary from brick to brick and change as you move your head or camera.

On March 15, I went with my friend Eva Arnott (seen about halfway through the set) to the Harvard Art Museums. We stopped at the Carpenter Center along the way, and took these pictures. I could have taken a lot more, but we wanted to have enough time at the museum.

19865. Cubase and SMP24

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-03-31 07:34:09 UTC
From: r.morelli@...
Topic: 19865 Message: 19865

Hi everyone,

It is my first message as a new members of this group.I use Cubase Audio with an Atari Falcon 14 Mo and a SMP24.
The channel 10 is normaly checked as a drum track.but in this case, my two expanders beeing linked with SMP24 on MIDI OUT 1 & 2, I have no sound, neither playing on the keyboard or playing the track. I must check the track as a MIDI track in order to lear the right sound. Strange isn't it ?

Would someone have an explanation about this ?

Thank you.

19866. Re: [atari-midi] Cubase and SMP24

Yahoo group: atari-midi (2014 — 2016)

From: Daniel Forró
Topic: 19865 Message: 19866

Are you sure your expander is set to respond on the channel 10 and
play drum set on this channel?

If yes and you see on the MIDI Out indicators and on the MIDI In
indicator on the expander some activity, are you sure the volume
controller and expression controllers were set differently from zero?

Prepare short initialization data - one bar or so - for your expanders
with some basic default setting and use it always when starting to
work on the new song. Then you can be sure that everything works as
expected. Then change settings as new song needs - Program change,
volume, expression, pan, effects depth and other MIDI controllers,
NRPN, RPN, also SysEx control data if necessary.

This way it's guaranteed that this initialization pattern in the first
bar of the song will always clean any "wrong" setting of your
expanders which can be a result of previously played song. Start to
record your song from bar 2.

Additionally:
Are you sure you use proper port for sending MIDI data? If you use two
MIDI ports, not only MIDI channel must be set but port number as well.
Then, if you use some GM/GM2/GS/XG expanders you should have
independent 32 MIDI channels (2 x 16).

Which expanders do you use?

Daniel Forro

hello,
are your smp drivers working well on the track output (other channels)?
i have smp on a mega st 4 together with midex +,
and both work very well.
regards
stan

19868. Cubase v2.0 - User Manual (at anonfiles)

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-03-31 13:59:30 UTC
From: gregor-malecha@...
Topic: 19833 Message: 19868

Hello Richard,

I noticed that you didn't get any replies to your request yet.

In case you haven't received the manual yet I uploaded it to anonfiles:
https://anonfiles.com/file/f925034f8e73175ce2aa013d46cad14c

The file section of the atari-midi group holds only up to 100 MB but this manual itself is already 103 MB big. (Somebody had created it by photographing all double pages and putting these photos in a pdf.)

:^) Greg

Thanks Greg!

No I didn't get hold of a copy yet, and I really appreciate you uploading this. The link isn't working for me though unfortunately.

I've been managing with the Cubase Audio manual, but it would be great to have the correct one. I might have to send my friend some beer and persuade him to surface-mail the hard copy to me.

Richard

When the two expanders are linked to the ATARI MIDI, I have no problem with the channel 10 and Drum track.
With the SMP24, I can see the vu-meter within Cubase react when I play the keyboard, but nothing on the expander, no activity.
All the others track operate normally.

Robert

Strange that the link isn't working for you guys. For me it does work.
Once I click the "Download" button it downloads automatically the PDF to the Temporary Internet Files on my computer and thereafter opens it in the PDF Reader from where I could save a copy.

Try with Popupblocker enabled and Java (Active Scripting) off.
It should work somehow if it does for me.

This alternate link brings me to the same page with the same behaviour/procedure:

Because of the availability of Mist I am selling all of my remaining Atari Hardware, I have a Mega 2 with no HD, a color monitor, keyboard, three atari mice and a STacy which has a HD (but it's not booting) 4 mb of ram - the keyboard had a beer spill but still works a bit.. I was going to send the STacy to Best Electronics for repair but I no longer NEED to have atari hardware as I've moved to Live and have converted all of the .all files I need to .mid files. Make an offer for stuff if you like, if I don't get a response here I'm putting it all on eBay..

19882. Re: Cubase and SMP24

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-04-07 11:35:06 UTC
From: r.morelli@...
Topic: 19865 Message: 19882

I use as expanders one SC55 Roland and a CBX-T3 Yamaha. They are linked on port MIDI OUT 1 & 2. So I have 16 channels for each expander.
Within Cubase, the vu-meter are moving when I play keyboard on drum track 10, but none on the expander (no led or no vu-meter active). If I want to ear something I must transform the drum track in MIDI track.
Not very useful for editing a drum track.

All others tracks react correctly.

I'll try to create a new song from scratch this evening, with propre parameters.

19883. [atari-midi] any copies of T-Basic flying around?

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-04-07 13:02:23 UTC
From: michaelP
Topic: 19883 Message: 19883

Hi MIDIfolks, along with the usual springtime desires on the rise in the lovely crisp sunshine of today in Sandwich, I have another: this has been raised before but... does anyone hereabouts have a notion of where I can obtain a copy of T-Basic for the ST (i.e., STeem in my case)? Every now and then I get the strong urge to roll my own PVGs and algorithmic routines, and this is one of those occasions. I know there are other music programming language applications out there (and I've dipped my toe occasionally) but I am reasonably au fait with Basic and it seems T-Basic might sit well with KCS (which is still my favourite, nay only used, sequencer especially for its divine Open Mode (almost like writing routines of subroutines of... in itself) and the great PVGvees).

Any help would be very gratefully received

happy easter and merry pesach to all who go midi in the summer

Hello

When you use a track as 'drum track', the "drum map" kicks in. As a result,the note number recorded can be translated into another note number when the drum instrument is played. This was made so to abstract the drumkit layout from the note information, so a drum track recorded for a MT-32 could be replayed by a KN2000, by loading the appropriate drum map for the instrument playing the track.

In the drum edit, if you expand the left panel where the drum instruments are listed,you will see more columns, defining what "note in" is translated into what "note out".
Maybe you have a problem there and your "note outs" don't correspond to a note actually playing an instrument on your expander ?
Kind regards

Vincent

I know all that and primaly with the MIDI input/outputI Atari I have had no problem with the drum track.

It's very strang I can record on a drum track without earing nothing !

I'll try to capture the MIDI flow in order to see what it's happening on this drum track.

Thanks Nick, I strolled along there and entered Dr T T-Basic but it returned no items; everything (on my dear old iMac) was acting very slowly and so I didn't try to restrict the search to Atari ST -- does the TOSEC archive enable filtering by platform or OS?

Anyway, I'll keep on keeping on trying to get this truly rare jewel...

thanks again

michaelP

No, thats another TBasic

Micheal is referring to the T-Basic that loaded as an MPE module in
the Dr T KCS from a copy protected floppy disk.
Which is probably why there doesn't seem to be an online version.

19898. And it Stoned Me -- Spy Pond 05.04.15 album on Flickr

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-05-05 04:09:44 UTC
From: Emile Tobenfeld
Topic: 19898 Message: 19898

Hi,

I uploaded the Flickr album

And it Stoned Me -- Spy Pond 05.04.15 which can be seen at

https://www.flickr.com/photos/22231918@N06/sets/72157651957900430/

"Oh, the water
Oh, the water
Oh, the water
…
And it stoned me to my soul
Stoned me just like Jelly Roll
And it stoned me
And it stoned me to my soul
Stoned me just like goin' home
And it stoned me"

Van Morrison

If you go out the back door of my building and walk two blocks, you get to Spy Pond, a lovely oasis in the middle of Arlington. I have resolved to spend more time there than I did last year, so after shopping and some other business I walked down to the pond at around 6:30.

It was a bright sunny day and the sun was beginning to set over the pond, which was being stirred up by a brisk but pleasant wind. The trees were just beginning to bud and there was a sculpture exhibit in the park. Unlike the singer in the song quoted above, I was high and dry, but I was reveling in the beauty in front of me, and my feelings matched the feelings i get when listening or dancing to the song.

I wouldn't categorize the pictures I took as among my very best, but I hope they evoke some of the feeling of a special hour by the pond.

If it's a *.mid file I suppose the SysEx data are put in a MIDI file. Any MIDI player or Sequencer software on any platforn should be able to playback that MIDI file and send the data to the K4.

No SysEx dump utility needed for that.

Topic: 19901 Message: 19901

Hi

I posted two new videos to You Tube, Water Dance Water Dance 05 09 15 003 and And Always And Always 05 09 15 004 .

My "Light into Motion" series combines improvised video, music, movement and spoken word. I usually do video mixing, but occasionally get up and dance, leaving one or two of my 'Mix DVDs' running. In the past, I would choose the video from whatever disks I happened to be mixing.

For my April 26 show, I decided to make a DVD specifically to create a structure for my dance. I chose water for my structure, and the video for "Water Dance" is a simple sequence of unprocessed water clips. I did two dance duets with Rachel Zwiebel (one of my favorite partners at Dance Freedom") and they were great fun, but I did not get good recordings. I decided to include "Water Dance" or a similar structure in future shows.

For my May 9 show, I performed "Water Dance" as a duet with Reme Gold, another frequent dance partner. Tim Mungenast -- guitar, Honjo Tsuyoshi -- saxophone, and Karen Klein -- spoken word rounded out the ensemble for this piece.

"And Always" is an epic improvisation that closed out the May 9 "Light into Motion" show. The title comes from Karen and Anne's spoke word improv. The performers were

Doctor T -- video
Tim Mungenast -- guitar
Honjo Tsuyoshi -- saxophone
Karen Klein -- spoken word and movement
Anne Tolbert -- spoken word and movement
Reme Gold -- movement

The pieces were performed at Outpost 186, Cambridge MA.

Hi All:

I'm needing to downsize considerably and all my Hardware has to go due to space constraints. NOW.

I'm located on the west coast, specifically PDX.

I have:

1 ATARI 1224 color monitor
1 ATARI mega keyboard,
3 ATARI Mice
1ATARI Mega II box boots fine no HD
1ATARI STacy - Laptop screen gone- keyboard has had drink spill HD on board but not booting- STacy boots fine totally fuctional with monitor keyboard and mouse added.

As noted, both brains work with peripherals and I'm not sure the drive in the STacy is non-functional, I just wasn't able to get it to boot to the hd after i disassembled it to attempt to clean the keyboard. (per Next electronics instructions for doing so.) I was going to use the Mega for left hand apps which Tim always implored me to do, but I now have no room for the stuff. I can use STeem for anything I need. These items need a new understanding home. I have a bunch of disks including the original atari system disks if you need them.

No reasonable offer refused.

If you can get all my files off the HD please return them!

Where are you located at? I've always been interested in getting both a Mega and a Stacy and I could probably fix the issues with the STacy.

Thanks,
Mark

Well that precludes local pickup, I'm in Florida ;) To be honest, you're going to get your best value out of ebay. A Mega ST2 just went for $255 in original box. I'd probably offer $200 for the Mega, stacy, keyboards, mice and not the monitor plus shipping plus some additional money for handling and pacaging, maybe $250 total. That's probably less than you'll get on ebay, but I just don't need need them you know? A broken stacy is probably worth $100-$150 on ebay and your Mega would fetch between $150 and $200, (but sometimes as low as $100 depending on the mood of the bidders) but you have to make the auctions and pay ebay and paypal their 14% or whatever it is these days.

But I would promise to attempt to rescue and return your data.

Recently I missed 2 broken falcon boards that went for $162. Easily my biggest ebay failures ever.

Thanks,
Mark

To be honest I'd rather do a straight transaction with you and sell the monitor on Ebay. Let me think about it. I have the original box for the Mega... I used to be a shipping manager so shipping to you as far as packing is not a problem.
I'll wait a day or so to see what I get from the list and get back to you. At this point I'd say there is a 75% chance they are coming to you. I'll check ebay prices and get back to you tomorrow night.

I'd be willing to give you something for the STacy if you can't work out a deal for everything with Mark. I sent you a text about it when you posted about it a few months ago. Did you say it is completely missing the screen, or just that the internal screen doesn't work?

Thanks.

19916. FS: ATARI HARDWARE UPDATE TO MARK

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-08-13 06:21:19 UTC
From: David Messenger
Topic: 19908 Message: 19916

Hi Mark:

Finally got to evaluating the stuff this afternoon. Things are different than I remember.
The Mega 2 boots fine as a system. Only one of the mice works, the other 2 are dead.
The STacy doesn't boot at all as the power supply for it is dead. I packed the Mega 2 into the original box
with the mouse that works and the keyboard and cable. One of the ends of the interface cable has a lock broken off, but as long as you don't pull it out of the PC jack everything works just fine. It's built like a telephone receiver cable that locks as you plug i in - the lock is broken off. I booted it up and tool a bunch of pictures. The keyboard on the STacy is a little sticky at the 10 key, that's the only thing I could check on the STacy, since no PS. I was able to get all of the files I wanted off of the STacy from a floppy disk I had left in the drive, I had to do a floppy disc to floppy disc copy operation 108 times as the original disc was formatted on an atari, but i had another floppy that was DOS formatted so once I copied the files to the dos disk the win 10 machine sees all my text files from the '90s.
If you still want anything get back to me, I'll send these pictures to you a few at a time.

Best,

David

i have tried running various midi software on Hatari, it seems to work perfectly, its a while since i tried it though so i can't remember all the details.

i definatly did use it for controlling soft synths, and can confirm that it works.
i was mostly playing with hardware midi equipment though. the timing was great.

there have been several updates since i last used Hatari, the Falcon emulation might even be working for audio.

ewan.

Topic: 1945 Message: 19929

Hi Atarians,

I have an Alesis Quasdrasynth (1st edition from '93). The rack moiunt version is called the S4. It is a 16-channel midi keyboard with 4-voice patches, and it can receive sysx files.

Can anyone recommend Atari software for it?

And does anyone have the instrument files for midiquest?

Thank you!

Dan

19930. Re: Atari, Atari, Atari...and more!!

Yahoo group: atari-midi (2014 — 2016)

Hello! I live in the Republic of Ireland. I have a veritable van load of Atari computers, disk drives, hard drives, other types of drives, etc. monitors, 3.5" floppies of all sorts along with many Atari based CDs. In addition I have boxes of all the popular UK magazines from almost the beginning to when they went out of print. In most cases, I also have the floppies that went with them! There are loads of odds and ends that a true enthusiast should be able to have years of fun with. There are also copies of some of the best Atari programs around, in many cases including the dongles required to run them. I am trying to trim down my possessions and so will be letting go of all this kit and related content. I cannot break up what I have on hand to sell individually. I would be looking for a small payment (compared to the value of the goods) to cover my costs in assembling all of what's on offer. I have no issue with whomever is sent to collect all of this (a friend, associate, etc.), but I would be unable to ship it. If whomever wants the gear, etc. has a friend, an associate..or? here in Ireland..and in a position to come and collect the stuff or, alternatively, can come themselves, I can promise you, the person making this acquisition will not be disappointed. Some of these items are quite esoteric and very special. I will try to answer all the questions I can, but the more expert you are in Atari, the more you will get out of the gear. Please contact me using my e-mail: citadel@... or phone on + 353-(0)21-4778168 I hate letting it go but I'd rather see it used and enjoyed than sit idle..or worse end up in a tip/dump. Thanks, michael

19931. Syncing cubase 2.0 with an alesis hd24

Yahoo group: atari-midi (2014 — 2016)
Date: 2015-11-12 16:14:56 UTC
From: capncol101@...
Topic: 19931 Message: 19931

Good Afternoon,

As the subject title suggests, I'm hoping to sync atari cubase, version 2, which comes with a midex + (midi and sympte) expander, with an alesis hd24 . I know that cubase runs to the Midi Time Code sent from hd24, but I can not see any reference in the cubase manual to the programme's capacity to send the required MMC to the alesis, so that both machines speak to each other.

Please can someone enlighten me?

(I have left a similar request on the hd24 forum)

Thanks,

Contrafunk Col

19934. atari midi editor for bohm dynamic 12/24 and orla dse synths?

Yahoo group: atari-midi (2014 — 2016)

over on the bohm dynamic yahoo group, a few of us have been searching in vain for this synth editor.

bohm dynamic 12/24 s an fm synth that was sold as a kit by german company bohm. and also sold as a completed synth by the italian company ORLA in several versions (dse9 dse12 and dse24)

they are all the same synth but have a diferet number of voices depending n the version. there are rumors of the existence of an atari st editor for this synth.

please! if anybody has copy of this editor we'd love to have a copy!

thanks,

ewan.

There is a device adaptor available for UNI_MAN. Free download from http://uniman.atari.org

Of you have never worked with Uniman the editor is a bit strange, but should work.

P.S.
The ORLA/BOHM manager/editor is in disk_002.zip, the main UNI_MAN program
in uniman3.zip

Hi, Martin,

that looks well.

Is there any chance to have repaired strangely scanned manuals? In all three languages is similar problem...

Thank you.

Daniel Forro

These 3 manuals are from a CD that I got directly from Zadok Products with all kinds of files from their Atari software heritage.
In fact they are not the real complete manual, only an additional manual they made when UNI_MAN was updated to one of the latest versions. I haven't checked them lately, maybe something is wrong with the files. I will take a look at them.

I have the complete manual on paper, but only in Dutch. It has been on my TODO list for ages to scan that manual and put a PDF version online.

Is there anyone reading this who has the UNI_MAN manual in English and/or in German? Not many people speak Dutch out there :-)
